I authorize the practitioners of Dermani Medspa to perform Pharmaceutical Grade Facial Peels, Facials, Dermplaning, Micro-needling, Microdermabrasion, Injectables, Radio Frequency, Laser Hair Removal and/or IPL treatments on me in an effort to improve/treat the following: Exfoliate or Remove outer layers of skin, Hair Reduction / Pseudofolliculitis Barbae / Dyschromia / Hyperpigmentation / Hair Reduction / PWS / Haemangioma / Angioma / Rosacea / Telangiectasia / Leg veins / Skin tightening / Body Contouring / Skin Rejuvenation.

I understand that there is a rare possibility of side effects or serious complications including permanent discoloration and scarring. I am aware that careful adherence to all advised instructions will help reduce this possibility.

I understand the below list of short-term effects and agree to follow matching guidelines:

**Your Participation** - in your skin care treatments will determine the outcome. It is important that you strictly adhere to your home care that your Nurse/esthetician has recommended.

**No guarantee** - Is expressed or implied as to the precise results or discomfort.

**Discomfort** – **Discomfort Lasers/Radio Frequency**: during the procedure and shortly after, I might experience an itching sensation or rubber band snap which degree will vary per hair density, area sensitivity and treatment head used but that does not last long. A mild “sun-burn” sensation may follow for typically up to one hour and will be reduced with application of cooling and soothing creams.

**Discomfort Facial Treatments**: During the treatment you may experience some temporary stinging or warm flushing. This will fade within a few minutes. During the next few hours, you may experience some tightening of the skin, which may last for several days.

**For Facial Peels** - For most patients, flaking begins within 48 hours. It is impossible to pre-determine how much peeling will
occur. The shedding process usually subsides within 5-7 days. Depending on the clinical peel performed and your skin quality, the following reactions may occur in some patients: 1) Prolonged redness, irritation & flakiness, 2) Dryness and sensitivity, 3) Severe allergic reactions in rare instances.

For Laser Treatments/Radio Frequency:
Perifollicular erythema/oedema – severity and duration of the rash depend on the intensity of the treatment and the sensitivity of the area to be treated. These phenomena may be reduced with application of cooling and/or inflammatory creams.
Micro-crusting over some areas with very dense and coarse hair – may take 5 to 10 days to flake off and it is important not to manipulate or pick which may otherwise lead to scarring.
Bruising may rarely occur and may last several days.
Flaking of pigmented lesions – crusts may take 5 to 10 days to disappear and it is important not to manipulate or pick which may otherwise lead to scarring.
Reddening and swelling – severity and duration depend on the intensity of the treatment and the sensitivity of the area to be treated. These phenomena may be reduced with application of cooling and/or inflammatory creams.
