T-4 ELECTRO STEER FOR SALTWATER

Trolling made easy....Steer your kicker from virtually anywhere in the boat. The T-4 Electro Steer is easily installed on any kicker motor that has a threaded tilt-tube and there is no need to drill holes in your transom to mount it. The drive unit has a rugged internal motor that steers the kicker through the use of a remote tethered to a 24 foot cable. Simply push one of the directional buttons and the T-4 will immediately respond, moving your kicker incrementally for precision control. For a dramatic move, hold down the button to quickly move your kicker from full right to left in seconds to swiftly and safely make a hard turn.

The drive unit and remote are powered by your boat's 12 volt battery. Motor is encased in black Delrin and is water resistant. Stainless mounting hardware and instructions included. You will need about 12" of space on each side of your kicker, and the T-4 can be installed on either side.

All of our remote steering systems can be used with the optional Wireless Remote System, part number 55-0105. The fob is shown here. If you are ordering your T-4 as a new system, be sure to order with "no electronics" designated by "NE" after the part number and then order your Wireless Remote, part # 55-0105

For the ultimate in control, consider adding the TrollMaster PRO3 Plus. This will allow you to wirelessly control your steering AND your speed as well. The wireless fob shown here will easily fit in a pocket or can be worn on a lanyard around your neck.

Weight: 9 lbs

Drive Unit
Housing Dimensions: 12" x 4.5"
